Subject: Region 2 weekly update

1. Possible pesticide poisoning case in st john, U.S. Virgin Islands. R2 continues to work hard on this incident. Family of four from Delaware on vacation in St. John may have been poisoned by methyl bromide application from first floor apartment while they were staying above in second floor apartment. This occurred 16 days ago. The mother has left the hospital and is in rehab center to address tremors in her hands - she is a dentist. The father came out of the coma but is still in critical condition. The two teenage boys remain in a medically induced coma and doctors plan not to attempt to take them out of it for another week because each time they attempted to in the past the boys had seizures and the seizures are now life threatening.

Ex. 7(a)

Ex. 5 - Deliberative Three osc s remain on site wrapping up sampling and assisting a team from atsdr which arrives on Tuesday. Lots of other details. Call me if you want more info.
